CryDecryptor – by ESET

This application decrypts files on Android devices compromised with the CryCryptor ransomware.

You can find a pre-built Android application package in the release section.

For a detailed analysis of the CryCryptor ransomware, see ESET researchers' article "New ransomware uses COVID-19 tracing guise to target Canada; ESET offers decryptor" on WeLiveSecurity.

Usage

If your device was infected with CryCryptor, here is a tutorial on how to decrypt your files.

1.- Open this page (https://github.com/eset/cry-decryptor) using your mobile device and tap the link below to download ESET's CryDecryptor tool:

https://github.com/eset/cry-decryptor/releases/download/v1.0/CryDecryptor.apk

2.- Access the file in your "Download" folder and tap it to launch the CryDecryptor installation.
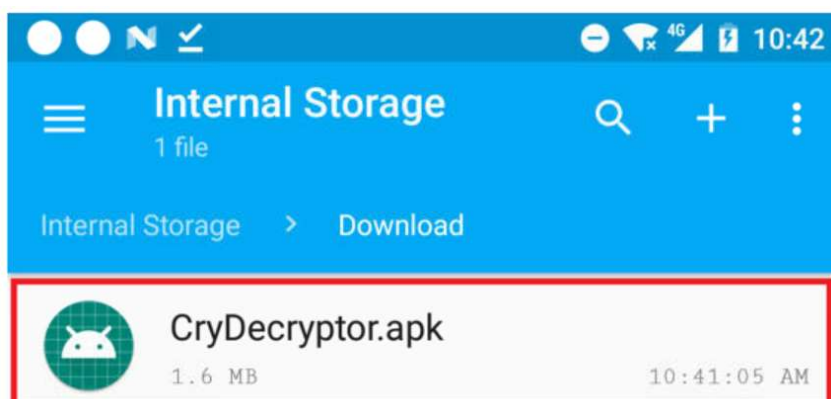

3.- Tap "Install".
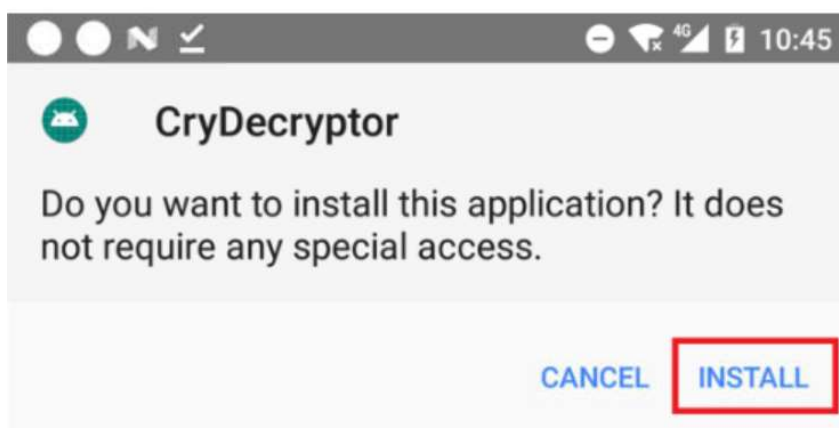

4.- Once installed tap on "Open" to launch CryDecryptor or find the CryDecryptor app on your Home screen.

5.- CryDecryptor tool will automatically try to launch the decryption process of the ransomware.
